Profile

Masters Student graduate with passion for programming, development of new solutions and automation processes. Hard working and dedicated to day to day tasks, comfortable to work on my own and as part of a team. Always eager to improve and to bring ideas to the table. In my spare time I enjoy hanging out with friends and family, football and playing guitar.

Education

Masters Degree, Aalborg University

09/2021 – 06/2023 | Copenhagen, Denmark
Working with various technology to improve interaction between humans and machines. One of courses, Machine learning, draw my interest in exploring the area which helped me develop further my Python skills and help me understand how can data analysis improve our everyday tasks.

Bachelor, Kea

02/2020 – 06/2021 | Copenhagen, Denmark
Graduated in time with relative good grades, attended online classes most of the time during pandemic.

AP, Zealand

09/2017 – 01/2020 | Roskilde, Denmark
Graduated with one of highest marks according to Danish scale grading system. Worked always on group project and actively participating in school events.

Professional Experience

Solution Expert/Specialist,

Wunderman Thompson

07/2018 – 05/2022 | Copenhagen, Denmark
Daily tasks involve working with marketing platform SalesForce and automation reports. Key responsibilities were:

- SQL automation
- Working with javascript to personalize content
- Working on .NET projects and Python scripts
- Automatizing marketing content

IT Assistant Administrator, Sabatronic Co

06/2017 – 09/2017 | Senta, Serbia

Maintaining computers and laptops, working with highly skilled colleague and learning along the way. The job also included communication with customers on daily basis

Software developer, Foss Analytics

06/2022 – 07/2023 | Copenhagen, Denmark

Most recent workplace where I had opportunity to create an impact on food quality industry. Some key responsibilities were:

- Working on backend application which automates analytic reports in C#
- Integrating Microsoft Azure DevOps to track progress on project in C#
- Creating powerBI reports to visualize companies data
- Creation of automatized data pipeline using Microsoft Azure, python, snowflake and sharepoint

Skills

Python (Data automation, backend integration, Django REST API integration),
Javascript (Frontend development),
React development (Frontend programming with API integrations to backend applications, creating responsive apps),
Django (Working on multiple full stack applications that included Django as backend)

Languages

English

C1

Serbian

Projects

Automated data pipeline

During my work at Foss I developed automated data pipeline from scratch using Python with Azure DevOps integrations. This would result into database being configured and that data being presentable on PowerBI.

Everything was automatic from getting the data, transforming it and updating it on powerBI.

Micro sms marketing platform

This is a personal project of mine which allows users to create their own personal ad for their content and send sms notification service containing link to that personal ad. With this they can track the reach of their customer/user and improve their customer reach in general.

This is a fullstack application made with Django in backend and React in frontend alongside with couple of third party projects.
